Lattice Offers New Compiler Companion For Amiga

Lombard, IL -- Lattice, Inc. now offers its new Compiler Companion which consists of ten utilities designed to enhance the productivity of Amiga programmers.

The Compiler Companion features EXTRACT and BUILD, which extract file names from a directory and build a command file from the list; CXREF, which generates a cross-reference listing of C language source files; DIFF, which compares files and reports the differences; FILES, which locates files by specified attributes; GREP, which matches character string patterns within a file; LMK, the Lattice Make Utility which automates the management of files based on dependencies and rules; SPLAT, which searches and replaces within one or more files; TOUCH, which updates the date and time stamps of individual files; and WC, which counts the number of words within a file. The price for the Compiler Companion is $ 99.00.

"This collection of utilities provides a complete programming environment for the Amiga regardless of the programming language used," said Wayne Nartker, Lattice vice president of sales and marketing. "All the utilities but CXREF are totally independent of the programming language used. This means that BASIC, MODULA-2, FORTRAN, PASCAL, and ASSEMBLER programmers as well as C programmers will benefit from this product.

"The programs that comprise the Compiler Companion replace the CXREF, LMK and Text Management Utilities that Lattice offered separately in the past," continued Nartker. "However, we have re-compiled them using our Lattice AmigaDOS C Compiler Version 4.0 so they require less memory and execute much faster. In addition, we have created a single new manual that covers each utility in detail. And at $ 100.00, the Compiler Companion is substantially lower than purchasing the individual products."

The Compiler Companion for the Amiga is available through dealers and distributors worldwide or directly from Lattice. For further information, contact: Lattice, Inc., 2500 South Highland Avenue, Lombard, IL 60148. Telephone (312) 916-1600.
